## Air damper actuators

GEB..1E

### Electronic rotary actuators for 2-position, 3-position, and modulating control

- Nominal torque 20 Nm
- Operating voltage AC 24 V ~ / DC 24...48 V = or AC 100...240 V ~
- Mechanically adjustable span between 0...90°
- Pre-wired with standard 0.9 m connection cables
- Type-specific variations with adjustable offset and span for the positioning signal
- Position indication: Mechanical and electrical
- Feedback potentiometer
- Self-adaption of the rotation angle range and adjustable auxiliary switches for supplemental functions

## Use

Rotary actuators are used in ventilation and air conditioning plants to regulate and shut off air dampers:

- For damper areas up to approximately 4 m<sup>2</sup> (Guideline: Always comply with the damper manufacturer's specifications).
- Suitable for use with 2-position and 3-position controllers as well as modulating controllers (DC 0/2...10 V) to control air dampers.
- We recommend a minimum pulse length of 500 ms on rotary actuators operated with 3-point control to ensure continuous and accurate operation.

Position indication Mechanical	Rotation angle position indication using a position indicator.	
Position indication Electric	By connecting the feedback potentiometer to external voltage, output voltage is generated proportional to rotation angle.	Position indicator: Output voltage U = DC 0/2...10 V is generated proportional to rotation angle. The direction of rotation (inverted or non-inverted) for output voltage U is based on the DIL switch position.
Auxiliary switch	The switching points for auxiliary switches A and B can be set independently in increments of 5° from 0 to 90°.	
Self-adaptation of the rotation angle range	-	The actuator automatically determines the mechanical end positions of the rotation angle range. The characteristic function (U <sub>o</sub> , ΔU) is mapped to the calculated rotation angle range. Power must be connected to DIL switch 2 (self-adaptation) for the function to operate.
Manual adjustment	The actuator can be manually adjusted by pressing the gear train disengagement button.	
Rotation angle limitation	A set screw can limit the rotation angle to between 0° and 90°.	

**Housing**

- Robust and light cast aluminum housing. The housing guarantees long life, even under harsh ambient conditions.

**Actuator / gears**

- Brushless, robust DC motors ensure reliable operation regardless of load. The damper actuators do not require an end position switch, are overload proof, and remain in place upon reaching the end stop.
- The gears are maintenance free and low noise.

Maintenance

The GEB..1E actuators are maintenance-free.

## Disposal

---

The device is considered an electronic device for disposal in accordance with the European Guidelines and may not be disposed of as domestic garbage.

- Dispose of the device through channels provided for this purpose.
- Comply with all local and currently applicable laws and regulations.
